

Williams Tamayo

Software Engineer — Full Stack

Email: walberh96@yahoo.com GitHub: github.com/walberh96 Portfolio: walberh96.github.io LinkedIn: linkedin.com/in/walberh96

SUMMARY

Full stack engineer with a strong backend focus and a passion for game development. I build web and mobile products end-to-end, including APIs, data layers, and production deployments using ASP.NET Core, Node.js, REST/GraphQL, and PostgreSQL/MySQL. My game development background adds practical backend depth in C#, multiplayer networking, and online server workflows, which translates directly to scalable service design, performance-minded systems, and reliable delivery.

SKILLS

React Native Flutter REST APIs GraphQL Node.js TypeScript JavaScript ASP.NET Core Entity Framework Core .NET
Java PostgreSQL MySQL PHP Docker Linux Bash Python C# Rust Next.js React Supabase Firebase

EXPERIENCE

Web Developer, Immigration Services Office

Miami, FL | 2021 - 2023

- Built and maintained the office web platform using HTML, CSS, JavaScript, and TypeScript, including landing pages, service forms, and conversion-focused user flows.
- Implemented an appointment and scheduling workflow used by clients and staff, including validation logic, status tracking, and admin-side updates.
- Developed internal tools for document intake and case follow-up, reducing repetitive manual tasks for day-to-day operations.
- Worked across the full delivery cycle: requirements gathering, implementation, QA with stakeholders, production deployment, and iterative feature updates.

Game Developer, 7xDevs

Florida, USA | Mar 2022 - Jan 2023

- Led core gameplay programming for an online RPG in Unity (C#), delivering production-ready systems across gameplay, networking, and UI.
- Designed and implemented the game backend using PHP and MySQL, including schema design, API-style endpoints, and persistence for player progression data.
- Deployed and maintained backend services on Linux servers, handling environment setup, service reliability, and production updates.
- Built an in-game social system with friends, friend requests, party invites, messaging, and multiplayer session interactions.
- Extended Mirror networking with custom logic for scene-specific spawns and per-player scene behavior using ClientRPCs, TargetRPCs, and Network Messages.
- Implemented store, inventory, and item-drop workflows with Scriptable Objects to support scalable content authoring and easier feature expansion.

Indie Game Developer, Solstale

Solo | Oct 2023 - Apr 2024 | [Steam](#)

- Owned full product workflow for a solo Steam release: concept, architecture, gameplay implementation, QA, packaging, and launch execution.
- Built gameplay systems, UI flows, and progression logic in Unity (C#), with a focus on stability and maintainable iteration loops.
- Managed release operations on Steam, including build preparation, updates, and post-launch issue resolution.

Freelance Web Developer, IV Plumbing Solutions

2025 | [Website](#)

- Designed and built a production business website using HTML, CSS, and JavaScript, focused on lead generation and clear customer conversion paths.
- Implemented responsive layouts, performance-minded front-end behavior, and SEO-friendly content structure for local search visibility.
- Own ongoing maintenance workflow including content updates, bug fixes, and iterative UX improvements based on business feedback.

PROJECTS

Warframe Utils .NET

Full-stack application

Decoupled app with an ASP.NET Core 8 API, Entity Framework Core, PostgreSQL, background monitoring services, and a Next.js 14 / React 18 / TypeScript front end—REST APIs, real-time market data, and notifications.
